

# Foundry

## Foundry

A good employer constantly strives to improve working conditions for its employees. Which is a major challenge in foundries and forges. Multiple-shift operation, hard physical work, noise, heat and dust as well as the ever-increasing deadline and performance pressure have a significant impact on the workplace. Our application solutions are **individual specialist plants, with and without robots.**

### Foundry:

Extreme automation requirements make it virtually impossible for modern companies to do without industrial robots. Thanks to our modern and refurbished used robots, even small and medium-sized foundries can now afford to automate their manufacture.

Their handling capacities in terms of range and weight adapt flexibly to the requirements of your business.

### Forges:

Heat, dirt and noise also make forges one of the harshest working environments of modern industrial production. In this sector it is extremely hard to create decent working conditions.

**Only robot-based automation guarantees smooth-running and continuous processes and consistent temperatures with low tool wear.**

The thermally insulated robot grippers easily withstand the extreme heat and precise control ensures tools are protected.
