## Plastic

In recent years, automation technology in plastics processing has become increasingly important.

Flexible yet cost-effective systems are a pre-requisite for processors who need to rapidly adapt to ever-changing market requirements and the pressure of rising costs. Our cost-effective refurbished robots help to reveal ways to flexibly increase your production and substantially reduce your costs at the same time.

Industry systems are becoming increasingly flexible: Industrial robots are now replacing more and more linear systems relating to flexible plant design for future tasks.

The 6-axis articulated arm robots significantly expand the range of action of work processes. They can be used in wide-ranging applications, are flexible and low-maintenance all-rounders and combine high loads with rapid and simple programming. They help your company achieve a quick yet precise production sequence.

As required, Krüger Industrieautomation GmbH will collaborate with you to develop the optimum automation solution.
