

Welding

Welding

The **individual welding solutions** of Krüger Industrieautomation GmbH range from simple robot cells with one device to complex automation solution which involve several robots working together in a process chain. For instance, one robot could load and position the work piece while another or multiple robots weld. This enables several complex work processes to be handled quickly and reliably.

Krüger Industrieautomation GmbH provides solution for the following processes:

- Spot welding
- Inert-gas welding
- Arc welding
- Percussion welding
- Bonding

More and more modern small and medium-sized businesses rely on innovative technologies and process automation in welding. Robot welding is part of the solution.
