

Preventive Maintenance

Description

Preventive maintenance of the robot system

Preventive maintenance, on a regular basis, is important to guarantee the operational availability of your robot system in a long lasting mode. Preventive maintenance keeps the system efficient and economical. The costs of a planned preventive maintenance are often on a reduced rate rather than an expensive machine breakdown.

Our service offer includes a one-time preventive maintenance until to an annually maintenance contract. During the process of the maintenance you will be kept informed about the condition of your robot system. Wear parts will be changed.

If the service technicians notice more defects, you will get an individual replacement offer immediately. Numerous spare parts can be ordered as new parts also as reviewed used parts.

Performance:

Type:	One-time preventive maintenance / annually maintenance contracts
Contents:	Inspection of round about 50 checkpoints on the robot system replacement of wear parts, exchange of fluids, defect analysis etc.
Completion:	Test record and seal of approval

All data provided is subject to alteration without notice.
